

FAIRBANKS MORSE DEFENSE COMMON RAIL RETROFIT

The FM PC2.5 Common Rail (CR) Retrofit replaces the existing mechanical pump fuel injection system with a common, high pressure rail electronic fuel injection system. This premium upgrade allows for significant fuel savings and cleaner, more efficient combustion. The retrofit is specifically designed and qualified for installation on engines currently in the fleet, with retrofits planned for LPD 17 class vessels.

- ~5.5% Fuel savings
- Reduced emissions
- Higher injection pressure
- Improved fuel atomization with more complete and efficient combustion
- Reduced maintenance
- Individual cylinder injection timing adjustments and optimization throughout the engine load range
- Improved low load operations and ship maneuverability
